

## Stonehenge: How Was It Built Without Modern Tools?

### Description

Imagine standing in front of a circle of massive stones that have stood for thousands of years! Welcome to **Stonehenge**, one of the world's most mysterious and magical landmarks, located in England. But here's the big question:

**How did ancient people move and lift these enormous stones without modern machines like cranes or trucks?**

Let's dive into this ancient mystery and explore some fun facts along the way!

---

### The Mystery of Stonehenge's Construction

Stonehenge was built over 4,500 years ago. The builders used two types of stones:

1. **Bluestones:** Smaller stones weighing up to 4 tons, brought from 150 miles away!
2. **Sarsens:** Huge stones weighing up to 25 tons, found nearby.

Without modern tools, how did they manage this?

#### Moving the Stones

- **Logs as Rollers:** Ancient people likely placed the stones on wooden logs and rolled them.
- **Sleds and Ropes:** Some believe they dragged the stones on sleds over wet ground, making it easier to slide.
- **Rivers:** The stones could have been floated on rafts down rivers for part of the journey.

#### Lifting the Stones

- **Earth Ramps:** They might have built ramps from dirt and dragged the stones to the top.
  - **Levers:** Using strong wooden beams, they could lift the stones inch by inch.
-

## Why Was Stonehenge Built?

No one knows for sure, but here are some ideas:

- **A Giant Calendar:** It might have helped people track the seasons by watching the sun's position.
  - **A Sacred Site:** People might have used it for ceremonies and prayers.
  - **A Meeting Place:** It could have been a spot for ancient gatherings and festivals.
- 

## Do You Know?

• **Stonehenge is older than the Great Pyramids of Egypt!**

• **Some stones weigh as much as 4 elephants combined!**

• **At sunrise during the summer solstice, the sun aligns perfectly with the stones.**

• **Scientists still discover new things about Stonehenge today using advanced technology.**

## Let's Test Your Knowledge!

### QUIZ

1. Where is Stonehenge located?
  - A. France
  - B. England
  - C. Egypt
2. What is the name of the smaller stones used in Stonehenge?
  - A. Sarsens
  - B. Bluestones
  - C. Pebbles
3. What do some people think Stonehenge was used for?
  - A. A shopping mall
  - B. A giant calendar
  - C. A castle

*(Scroll down for answers!)*

## Interactive Puzzle

Help the builders move a stone! Arrange these steps in the correct order:

1. Build a ramp
  2. Place the stone on logs
  3. Roll it to the site
-

## Poll Time!

What do YOU think Stonehenge was for?

- A giant calendar
  - A sacred site
  - A meeting place
  - Something else
- 

## Stonehenge Today

Even after thousands of years, Stonehenge still amazes us. People from all over the world visit to see its beauty and wonder about its secrets. Who knows? Maybe one day you'll solve the mystery!
